16 mm Polypropylene Climbing Nets with Polyhalf Clips **Installation Recommendations**

Nets are made with 16 mm polypropylene rope, hand knotted together and made as a square. The net will come with a label indicating the top.

These nets can be fitted in various way depending on the application of the net, on how it's being used and what it's being fitted too.

The nets have been manufactured in accordance with BSEN1176/77 and should be installed as per these guidelines.

- Loosely fix/secure the net into place within the inside of your timber frame.
- To start use 2 x polyhalf clips to secure the net in each corner, one on each side.
- Place the polyhalf clip over the rope and put the screw through the clip, through the rope and into the timber.
- Once the corners have been secured, place the remaining polyhalf clips within each mesh.
- Make sure all screws are as tight as possible and check on a regular basis.

The net must be fitted as taught as possible, any slack or movement in the net will increase the wear.

Recommended user weight is approx. 100 kilos at any one time.

Supervision is always needed when the net is being used by children.
